EXECUTIVE SUMMARY

Strategic and innovative Senior Android Developer and Mobile Architect with over 9 years of experience delivering premium, high-scale applications to millions of users globally. Mastery of the modern Android stack, including Kotlin, Jetpack Compose, Coroutines, and Flow. Proven expertise in architecting robust, offline-first mobile solutions and migrating large-scale legacy Java codebases to modular Kotlin multiplatform architectures. Expert in mobile performance profiling, memory leak detection, and battery life optimization. A visionary leader who bridges the gap between complex technical requirements and intuitive user experiences, consistently maintaining 4.8+ star ratings on the Google Play Store. Dedicated mentor and contributor to the Android community, specialized in Reactive programming (RxJava/MVI), Dependency Injection (Hilt/Dagger), and CI/CD automation for mobile delivery.

CORE TECHNICAL COMPETENCIES

- **Languages:** Kotlin (Expert), Java (Expert), Groovy (Gradle), SQL (Room/SQLite), C++ (JNI/NDK).
- **UI & Frameworks:** Jetpack Compose, View System (XML), Material Design 3, Custom Views, MotionLayout.
- **Architecture Patterns:** MVVM, MVI, Clean Architecture, Repository Pattern, Multi-module Architecture.
- **Jetpack Libraries:** Room, Navigation, WorkManager, DataStore, CameraX, Paging 3, Media3.
- **Concurrency & Networking:** Kotlin Coroutines, Flow, RxJava 2/3, Retrofit, OkHttp, GraphQL (Apollo).
- **Dependency Injection:** Hilt, Dagger 2, Koin.
- **Performance & Testing:** Android Profiler, LeakCanary, JUnit 5, MockK, Espresso, Barista, Robolectric.
- **DevOps & Tools:** Firebase (Crashlytics, Remote Config), Bitrise, CircleCI, App Center, Proguard/R8.

PROFESSIONAL EXPERIENCE

Staff Android Engineer | Global Commerce Corp | Mountain View, CA

May 2021 – Present

- **Architectural Modernization:** Led the enterprise-wide transition from an XML-based view system to Jetpack Compose, reducing UI code volume by 45% and increasing developer velocity by 30%.
- **Modularization Strategy:** Spearheaded the decomposition of a massive monolithic Android app into 40+ independent feature modules, enabling parallel development for 5 separate engineering squads.
- **Performance Optimization:** Reduced app startup time from 4.2 seconds to 1.8 seconds through Baseline Profiles, lazy initialization of SDKs, and custom Proguard optimizations.

- **Design System Leadership:** Developed a reusable, themed-enabled UI Library based on Jetpack Compose that is now used across all 4 of the company's mobile products.
- **Store Management:** Manage the automated release pipeline to the Google Play Store, handling staged rollouts and A/B testing for over 10 million Monthly Active Users (MAU).
- **Code Quality:** Integrated Static Analysis tools (Detekt, Lint, Ktlint) into the CI pipeline, reducing technical debt by 20% within the first year.

Senior Android Developer | FinTech Innovators | New York, NY

January 2018 – April 2021

- **Secure Finance Architecture:** Engineered a high-security mobile banking application using BiometricPrompt API and EncryptedSharedPreferences, passing three rigorous third-party security audits.
- **Offline-First Implementation:** Built a robust sync engine using Room and WorkManager to ensure seamless user operation in low-connectivity environments.
- **Reactive Programming:** Implemented a state-management system using MVI (Model-View-Intent) and RxJava, significantly reducing UI state bugs in complex transaction flows.
- **Integration:** Managed the integration of complex third-party SDKs for KYC (Know Your Customer) and real-time fraud detection.
- **Mentorship:** Mentored 6 junior/mid-level developers through structured pair programming and technical design document reviews.

Android Developer II | StartupStream | Los Angeles, CA

August 2014 – December 2017

- **MVP to MVVM Migration:** Led the transition of the core application architecture from MVP to MVVM using Architecture Components (ViewModel, LiveData).
- **Custom UI Development:** Developed a custom video player using ExoPlayer with features for picture-in-picture and background playback.
- **Resource Optimization:** Reduced APK size from 45MB to 18MB by migrating to Android App Bundles and optimizing asset management.
- **API Collaboration:** Collaborated with backend teams to define RESTful API contracts that minimized mobile data consumption.

ANDROID-SPECIFIC LEADERSHIP CASE STUDIES

Case Study: Enterprise-Scale Modularization

The Challenge: The core application had grown to over 500k lines of code in a single module. Build times were exceeding 15 minutes, and merge conflicts were constant between squads.

The Solution:

- **Strategy:** Adopted a Layered Modularization approach (App, Feature, Library, Core layers).
- **Implementation:** Used Dagger/Hilt for cross-module dependency injection and a custom internal "Navigator" library for decoupled navigation between modules.
- **Result:** Build times reduced to 4 minutes. Features can now be developed and tested in isolation, allowing for weekly release cycles instead of monthly.

Case Study: Battery & Data Optimization for Emerging Markets

The Challenge: Users in regions with limited data plans and older hardware were experiencing high battery drain and excessive data costs, leading to a high churn rate.

The Solution:

- **Network Optimization:** Implemented aggressive Gzip compression and image format conversion to WebP via OkHttp Interceptors.
- **Battery Profiling:** Used the Battery Historian tool to identify unnecessary wake-locks caused by background analytics pings.
- **Result:** Reduced background data usage by 60% and increased average battery life for active users by 15%. User retention in the target regions increased by 22%.

TECHNICAL DEEP DIVES

Android Framework & Memory Management

- **Memory Profiling:** Expert use of Memory Profiler to identify heap growth and solve complex memory leaks in activity-fragment lifecycles.
- **Process Death:** Implementation of saved state handles to ensure graceful recovery from system-initiated process termination.
- **JNI/NDK:** Experience in optimizing image processing tasks using C++ via the Native Development Kit for high-performance requirements.

Modern UI Strategy (Jetpack Compose)

- **State Management:** Expertise in Hoisting, `DerivedStateOf`, and `SnapshotStateList` to maintain performant recomposition.
- **Animation APIs:** Building complex, high-fidelity UI transitions using `Animatable` and `Transition` APIs in Compose.
- **Accessibility:** Ensuring AA/AAA accessibility compliance using Semantics and custom content descriptions for screen readers.

APP STORE & RELEASE MANAGEMENT

- **Staged Rollouts:** Experience in managing 1%, 5%, 20%, and 100% rollout schedules to mitigate risk.
- **Vitals Monitoring:** Daily monitoring of ANR (App Not Responding) rates and Crash-free user metrics (target > 99.9%).
- **Play Integrity:** Implementing Play Integrity API to ensure the app is running on a genuine Android device.

EDUCATION & CERTIFICATIONS

Education

Master of Science in Mobile Systems Engineering

University of California, Berkeley | 2014

Specialization: Human-Computer Interaction

Bachelor of Science in Computer Science

San Jose State University | 2012

Certifications

- Google Associate Android Developer Certification
- Google Certified Professional Cloud Architect
- Udacity Android Nanodegree Graduate

THOUGHT LEADERSHIP & COMMUNITY

- **Speaker:** "Modularizing your Mobile Monolith" – Droidcon San Francisco, 2023.
- **Blogger:** Technical contributor to "Android Weekly" and "Medium: Mobile Architecture."
- **Open Source:** Maintainer of a popular Kotlin-first networking wrapper (2k+ stars on GitHub).

DETAILED PROJECT PORTFOLIO

Project: "VisionCam" - AR Shopping Experience

Designed an ARCore-powered feature allowing users to visualize furniture in their homes. Optimized the rendering pipeline to maintain 60FPS on mid-range Android devices.

Project: "SecurePay" - Biometric Wallet

Built a white-label mobile wallet for regional banks, focusing on hardware-level security (TEE) and custom encryption layers for offline transactions.

CAREER TIMELINE

- **2012-2014:** Focus on Java, Android Fragments, and XML layouts (Honeycomb/KitKat era).
- **2015-2017:** Early adoption of Kotlin, MVP architecture, and RxJava.
- **2018-2020:** Senior roles focusing on Security, CI/CD, and MVVM.
- **2021-Present:** Staff leadership, Jetpack Compose, and Organizational-scale Modularization.
