

VIKRAM SHETTY

SR. AUTOMATION QA ENGINEER

LinkedIn: [linkedin.com/in/vikramshetty](https://www.linkedin.com/in/vikramshetty) | Phone: (469) 555-0341 | vikram.shetty@email.com | Dallas, TX

PROFESSIONAL SUMMARY

- **9+ years** of experience in Software Test Automation Engineering across fintech, healthcare, e-commerce, and telecom domains, designing scalable test frameworks and CI/CD-integrated automation pipelines.
- Expert in **Selenium WebDriver** with **Java** and **Python**, building **Page Object Model (POM)** and **Data-Driven** frameworks from scratch, achieving **80%+ automation coverage** on enterprise web applications.
- Proficient in **API automation** using **Rest Assured**, **Postman**, and **Karate Framework**, validating REST/GraphQL services, OAuth2 authentication, and JSON/XML payloads with automated assertion suites.
- Hands-on experience with **BDD frameworks** (Cucumber, SpecFlow) integrating Gherkin feature files with business-readable scenarios, enabling collaboration between QA, developers, and product owners.
- Strong expertise in **CI/CD pipeline integration** using **Jenkins**, **GitHub Actions**, and **Azure DevOps**, triggering automated regression suites on code commits with **Allure** and **ExtentReports** reporting.
- Experienced in **mobile test automation** using **Appium** for iOS and Android native and hybrid apps, and **cross-browser automation** with **Playwright** and **Cypress** for modern web applications.
- Performance testing proficiency with **JMeter** and **Gatling**, designing load, stress, and spike tests for API endpoints, and analyzing results to identify bottlenecks under concurrent user loads.
- Solid foundation in **Manual QA** enabling effective exploration, root cause analysis, and defect reporting alongside automation responsibilities in Agile environments.

TECHNICAL SKILLS

Automation Frameworks & Tools:

Selenium WebDriver, Playwright, Cypress, Appium, TestNG, JUnit, Cucumber (BDD), SpecFlow, Karate Framework, Rest Assured, WireMock

Programming Languages:

Java, Python, JavaScript, TypeScript, Groovy, Shell Scripting

API Testing:

Rest Assured, Postman, SoapUI, Karate, GraphQL testing, Swagger, OAuth2

CI/CD & DevOps:

Jenkins, GitHub Actions, Azure DevOps, GitLab CI, Docker, Maven, Gradle, Git, BitBucket

Performance Testing:

Apache JMeter, Gatling, BlazeMeter, k6

Test Management:

JIRA, Zephyr, TestRail, qTest, HP ALM, Confluence

Cloud & Containerization:

AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes, Selenium Grid, BrowserStack, Sauce Labs

Database & Backend:

SQL, Oracle, MySQL, PostgreSQL, MongoDB, SQL Developer

Reporting:

Allure Reports, ExtentReports, ReportPortal, HTML Reports

Methodologies:

Agile, Scrum, SAFe, Shift-Left Testing, TDD, BDD

CERTIFICATIONS

- **ISTQB Certified Tester – Test Automation Engineer (CT-TAE)** | ISTQB, 2023
- **Selenium WebDriver with Java – Advanced** | Udemy / Verified Certificate, 2022
- **AWS Certified Cloud Practitioner** | Amazon Web Services, 2023
- **Certified Agile Tester (CAT)** | iSQL, 2021
- **Postman API Fundamentals Student Expert** | Postman, 2022
- **ISTQB Certified Tester – Foundation Level (CTFL)** | ISTQB, 2018

EDUCATION

Master of Science in Computer Science

University of Texas at Arlington, Arlington, TX | 2014

Bachelor of Engineering in Electronics & Communication

Visvesvaraya Technological University, Karnataka, India | 2012

PROFESSIONAL EXPERIENCE

Wells Fargo | Charlotte, NC

SR. AUTOMATION QA ENGINEER *February 2022 – Present*

- Architected and maintained a **Selenium + Java + TestNG + Maven** automation framework using **Page Object Model (POM)** design pattern, covering online banking, payments, and account management modules with **85% automation coverage**.
- Built **BDD automation framework** using **Cucumber + Selenium + Java**, writing Gherkin feature files collaboratively with product owners to enable business-readable regression scenarios executed in Jenkins CI pipelines.
- Automated **REST API testing** using **Rest Assured** integrated with TestNG, validating payment processing APIs, fund transfer endpoints, and account service APIs with schema validation and data-driven JSON payloads.
- Integrated automation suite with **Jenkins CI/CD pipeline** using Git triggers, executing regression tests on every pull request with **Allure Reports** published to the team Confluence dashboard automatically.
- Implemented **parallel execution** using **Selenium Grid** and **BrowserStack**, reducing full regression suite run time from **4 hours to 45 minutes** across Chrome, Firefox, Edge, and Safari browsers.
- Developed **performance test scripts** using **Apache JMeter** for core banking APIs, simulating 5,000 concurrent users and identifying response time regressions prior to major quarterly releases.
- Conducted **database validation** using **SQL** against **Oracle** databases to verify transaction records, account balances, and audit logs aligned with business rule outputs in the UI.
- Validated **PCI-DSS compliance** requirements including encrypted card data masking, session timeout behavior, and RBAC restrictions using automated test scenarios.
- Mentored a team of 3 junior automation engineers on Selenium best practices, POM design, Git workflows, and CI/CD integration, conducting weekly code review sessions.
- Collaborated in **Agile Scrum** sprints, maintaining the automation backlog in **JIRA/Zephyr**, ensuring 100% automation coverage for all new features before sprint release sign-off.

Environments: *Selenium, Java, TestNG, Maven, Cucumber, Rest Assured, Jenkins, Git, Allure Reports, Selenium Grid, BrowserStack, Oracle, SQL, JMeter, JIRA, Zephyr, Confluence*

UnitedHealth Group | Minnetonka, MN

AUTOMATION QA ENGINEER *May 2019 – January 2022*

- Developed **Playwright + TypeScript** automation framework for healthcare member portal, automating patient eligibility, claims submission, and provider search workflows with **80% test coverage**.
- Built **Appium** automation scripts for iOS and Android native apps covering member ID card, benefit summary, and telehealth appointment modules, integrating with **Sauce Labs** for device cloud execution.
- Automated **FHIR API testing** using **Karate Framework**, validating Patient, Claim, Coverage, and ExplanationOfBenefit resources with assertions for HL7 FHIR R4 compliance and data integrity.
- Integrated test automation with **Azure DevOps** pipelines, configuring nightly regression runs, publishing **ExtentReports** to Azure Test Plans, and generating automated test metrics dashboards.
- Performed **GraphQL API automation** using Postman and custom JavaScript assertions, validating member data queries, mutation operations, and subscription event webhooks.
- Executed **load testing** using **Gatling** for claims adjudication APIs, simulating peak open enrollment traffic of 10,000 concurrent users and validating sub-2-second response SLAs.
- Built **containerized test execution** environment using **Docker + Selenium Grid**, enabling isolated, reproducible automation runs across QA, staging, and pre-production environments.
- Conducted **SQL-based data validation** in **Oracle** databases, verifying ICD-10 code mappings, member eligibility periods, and claims processing accuracy against expected benefit configurations.
- Supported **HIPAA compliance testing** including PHI data masking, audit log generation, role-based access enforcement, and session management validation across all tested application modules.

Environments: *Playwright, TypeScript, Appium, Karate, Sauce Labs, Azure DevOps, Gatling, Docker, Selenium Grid, Oracle, SQL, ExtentReports, JIRA, TestRail, FHIR, HL7*

Amazon | Seattle, WA

QA AUTOMATION ENGINEER *August 2017 – April 2019*

- Designed and executed **Cypress + JavaScript** automation framework for Amazon Seller Central portal, covering product listing, inventory management, pricing rules, and order fulfillment workflows.
- Built **data-driven automation** using **Selenium + Python + Pytest**, parameterizing test cases with Excel/CSV datasets and executing cross-browser regression suites across 500+ product catalog scenarios.
- Automated **REST API testing** for seller APIs using **Postman collections** and **Newman CLI** integration within **GitHub Actions** workflows, validating CRUD operations, pagination, and rate limiting.
- Implemented **visual regression testing** using **Percy.io** integrated with Cypress, detecting unintended UI layout changes across deployments for product listing and checkout page components.
- Developed **JMeter performance tests** for product search, add-to-cart, and checkout payment flows under peak load conditions simulating Prime Day traffic scenarios with 20,000 concurrent users.
- Participated in **shift-left testing** practices, reviewing user stories in sprint planning, creating automation scripts in parallel with development, and running smoke tests against feature branches daily.
- Maintained **test data management** strategy using dedicated test accounts, mock data scripts, and environment-specific configuration files, ensuring reliable and independent test execution.

Environments: *Cypress, JavaScript, Selenium, Python, Pytest, Newman, GitHub Actions, JMeter, Percy.io, MySQL, Postman, JIRA, Confluence, Agile/Scrum*

AT&T | Dallas, TX

QA ENGINEER *June 2015 – July 2017*

- Developed **Selenium WebDriver** + **Java** automation scripts for AT&T's customer self-service portal, covering account management, bill payment, service upgrades, and device ordering modules.
- Built automated **regression test suite** using **TestNG** with data-driven approach reading test parameters from Excel files, covering 300+ test scenarios with daily Jenkins execution.
- Performed **API testing** using **SoapUI** for telecom provisioning and billing SOAP web services, validating request/response schemas, WSDL compliance, and error code handling.
- Executed **mobile browser testing** using **Appium** and Selenium for Android and iOS devices, validating responsive design and mobile-specific workflows in the myAT&T mobile application.
- Managed test cases and defects in **HP ALM Quality Center**, maintaining organized test sets and providing weekly defect aging reports to project management and stakeholders.
- Collaborated with the offshore development team to triage and resolve automation failures, distinguishing genuine application defects from test script flakiness through root cause analysis.

Environments: *Selenium, Java, TestNG, Jenkins, SoapUI, Appium, HP ALM, Maven, Git, SQL Server, BrowserStack, Agile/Waterfall*
