

YESHWANTH

<https://www.linkedin.com/in/yeshwanth-s91/> | +1(937)-234-7891 | yeshwanths.yrs@gmail.com

Design and develop **robust, scalable, and high-performance distributed systems**.

- Develop backend components and services using **Java**, applying **Test-Driven Development (TDD)** and **Behavior-Driven Development (BDD)** methodologies (e.g., **Cucumber-JVM**).
- Work with **Spring FX** and **Spring Boot** frameworks to build microservices architecture.
- Integrate and manage **Document Databases** such as **MongoDB** or **DynamoDB**.
- Build and maintain **RESTful APIs** and work with **GraphQL** services for efficient data retrieval.
- Develop and maintain **event-driven systems** using **Kafka**.
- Implement **authentication and authorization protocols** using **JWT** and **OAuth**.
- Deploy applications using **Docker** containers and manage infrastructure via **Kubernetes**.
- Write and run code in a **Mac OS development environment**.
- Collaborate with cross-functional teams to deliver high-quality software on time.
- Utilize **Azure Cloud Platform** for application deployment and services (Azure experience is highly preferred).

Technical Skills Required:

- Strong experience in **Java** backend development
- Proficiency in **JUnit** for unit testing
- Hands-on experience with **TDD** and **BDD** approaches (Cucumber-JVM)
- Proficient with **Spring FX** and **Spring Boot**
- Experience working with **MongoDB** or **DynamoDB**
- Skilled in developing and consuming **REST APIs**
- Knowledge of **Kafka** for messaging and event streaming
- Experience with **GraphQL** for API development
- Understanding of security protocols like **JWT** and **OAuth**
- Hands-on experience with **Docker** and **Kubernetes**
- Comfortable working in a **Mac OS** environment
- Cloud experience with **Azure** (highly preferred)

Professional Summary

- **Designed and developed robust, scalable distributed systems** using **Java**, implementing complex backend components and services. Utilized advanced Java features to create high-performance solutions, optimizing code for efficiency and maintainability while ensuring system reliability and fault tolerance.
- Applied **Test-Driven Development (TDD)** and **Behavior-Driven Development (BDD)** methodologies extensively in Java projects, using tools like Cucumber-JVM. Implemented comprehensive test suites with TDD and BDD approaches, significantly improving code quality and reducing defects in production environments.
- Demonstrated expertise in **Spring FX and Spring Boot frameworks**, building microservices architectures for large-scale applications. Leveraged Spring's dependency injection and aspect-oriented programming features to create modular, easily maintainable microservices that improved overall system scalability.
- Integrated and managed **Document Databases** including **MongoDB and DynamoDB**, designing efficient data models and implementing optimized query patterns. Developed strategies for data partitioning and sharding in MongoDB, ensuring high performance and scalability for large-scale data operations.
- Built and maintained **RESTful APIs**, focusing on best practices for API design and implementation. Developed comprehensive API documentation, implemented versioning strategies, and ensured proper error handling and security measures in RESTful services across multiple projects.
- Worked extensively with **GraphQL services** for efficient data retrieval, designing flexible and performant schemas. Implemented GraphQL resolvers and mutations, optimizing query execution and implementing caching strategies to enhance API performance and reduce backend load.
- Developed and maintained **event-driven systems using Kafka**, implementing fault-tolerant and scalable message processing pipelines. Designed Kafka topics and partitioning strategies, ensuring high throughput and low latency for real-time data streaming applications.

- Implemented authentication and authorization protocols using **JWT and OAuth**, enhancing application security. Developed custom authentication providers, integrated with identity management systems, and implemented role-based access control (RBAC) to secure microservices and APIs.
- Deployed applications using **Docker containers** and managed infrastructure via **Kubernetes**, ensuring consistent and reproducible deployments. Created optimized Dockerfiles, implemented CI/CD pipelines for container builds, and designed Kubernetes deployments for high availability and scalability.
- Utilized **Azure Cloud Platform** for application deployment and services, leveraging various Azure services for scalable and resilient architectures. Implemented Azure Functions for serverless computing, utilized Azure Cosmos DB for globally distributed data, and integrated with Azure Active Directory for identity management.
- Collaborated with cross-functional teams to deliver high-quality software on time, participating in agile ceremonies and code reviews. Mentored junior developers, conducted technical design sessions, and contributed to architectural decisions to improve overall team productivity and code quality.
- Demonstrated proficiency in **JUnit for unit testing**, creating comprehensive test suites to ensure code reliability. Implemented parameterized tests, mocking frameworks, and test coverage analysis tools to achieve high test coverage and identify potential issues early in the development cycle.
- Developed expertise in working with **Mac OS development environments**, efficiently utilizing command-line tools and development software. Customized development workflows and shell scripts to enhance productivity in Mac OS, while ensuring cross-platform compatibility of developed applications.
- Designed and implemented **security protocols** for microservices and APIs, focusing on best practices for secure software development. Conducted regular security audits, implemented encryption for data at rest and in transit, and integrated with security information and event management (SIEM) systems.
- Optimized **database performance** in both SQL and NoSQL databases, implementing efficient indexing strategies and query optimizations. Designed data migration scripts, implemented database versioning, and developed strategies for handling large-scale data operations with minimal downtime.
- Contributed to the design and implementation of **fault-tolerant and highly available systems**, utilizing distributed caching, load balancing, and service discovery techniques. Implemented circuit breakers, retries, and backoff strategies to enhance system resilience and maintain high availability during partial outages.
- Developed **custom monitoring and alerting solutions** for distributed systems, integrating with various observability tools and platforms. Implemented distributed tracing, log aggregation, and performance metrics collection to enhance system observability and facilitate rapid issue resolution.
- Participated in **open-source projects** related to Java development and microservices, contributing code improvements and documentation. Actively engaged in technology communities, presenting at local meetups and conferences on topics such as microservices architecture and cloud-native development practices.

TECHNICAL SKILLS

- **Programming Languages:** Java 8/11/19, SQL, Golang, Python, Scala, Kotlin, NodeJS, C
- **Java/J2EE Technologies:** Servlets, JSP, JSTL, JDBC, JMS, JNDI, RMI, EJB, JFC/Swing, AWT, Multi- threading, Java Networking, Struts, JSF, NoSQL, Ext.JS
- **Web Services:** HTML5, CSS3, SASS, DOM, XML, JSON, JavaScript(+ES6), Ajax, jQuery, Angular 8/11, ReactJS, NodeJS, Socket.io, Express JS, Swagger, UI, Bootstrap, Google Web Toolkit
- **Frameworks:** Spring (Core, MVC, Security, Data), Hibernate, Struts, JUnit, Mockito, JPA
- **Cloud Technologies:** AWS Cloud Components S3, EC2, Pivotal Cloud foundry (PCF), Lambda, Elastic Bean Stalk, API Gateway, ECS, RDS. Azure Functions, Azure Virtual, Azure DB, machines, GCP cloud functions
- **Cloud Formation Tools:** Terraform, AWS Cloud Formation
- **Application/Web Servers:** IBM WebSphere, BEA WebLogic, Apache Tomcat, JBoss, Web Socket
- **Messaging Systems:** RabbitMQ, Kafka, JMS, AWS-SQS
- **Development Tools:** Eclipse, IntelliJ IDEA, NetBeans, Maven, Jenkins, Docker, JIRA
- **Monitoring and Logging:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk
- **Scripting:** Shell Scripting, JavaScript, Groovy, Python, PowerShell, Ruby
- **Databases:** Oracle 8i/9i/10g/11g, Postgres SQL, Mongo DB, SQL Server, Cassandra

- **Testing Tools:** JUnit, Mockito, Selenium, Karma, Jasmine, Cucumber, SoapUI
- **Monitoring Tools:** Nagios, Splunk and CloudWatch, Elastic log, Grafana
- **Build & CI/CD Tools:** Ant, Maven, Gradle, NPM, Jenkins, Gitlab CI
- **Security Technologies:** OAuth 2.0, JWT, SSL/TLS, Spring Security
- **SDLC Methodologies:** Agile (SCRUM, Kanban), Waterfall
- **Version Control:** GIT, SVN, GitHub, Bitbucket, GitLab
- **Configuration Control:** Jenkins, Bamboo, Chef
- **Virtualization:** Docker, Kubernetes, AWS ECS
- **Package Management:** Nexus, JFrog
- **Tracking Tools:** JIRA, ServiceNow

PROFESSIONAL EXPERIENCE

Client: eWorld Enterprise Solutions, Inc
Honolulu, HI
Sr Full Stack Engineer

Dec 2022 – Present

Environment: Java, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Cucumber-JVM, Spring FX, Spring Boot, MongoDB, DynamoDB, RESTful APIs, GraphQL, Kafka, JWT, OAuth, Docker, Kubernetes, Mac OS, Azure Cloud Platform, JUnit, Microservices

- **Designed and implemented** a robust **full-stack application** for state government services using **Java 17** and **Spring Boot 3.0**, integrating **REST APIs** and **GraphQL** for flexible data querying. Utilized **Spring Security** with **JWT** and **OAuth 2.0** to ensure secure user authentication and authorization across the platform.
- Developed a **scalable microservices architecture** using **Docker** and **Kubernetes** for containerization and orchestration. Implemented **Kafka** for event-driven communication between services, ensuring high availability and fault tolerance in the state government's distributed system.
- **Engineered a high-performance data storage solution** using **MongoDB** and **DynamoDB**, optimizing query performance and data modeling for state-specific requirements. Implemented **sharding** and **indexing strategies** in MongoDB to handle large-scale data growth efficiently.
- Led the **migration** of legacy state government applications to a **cloud-native architecture** on **Azure**, utilizing **Azure Kubernetes Service (AKS)** for container orchestration. Implemented **CI/CD pipelines** using **Azure DevOps** to streamline deployment processes and improve overall system reliability.
- Implemented an **advanced logging and monitoring system** using the **ELK stack** (Elasticsearch, Logstash, Kibana) and **Prometheus** for real-time system health tracking. Configured custom dashboards in Kibana to provide actionable insights for state government IT operations.
- **Designed and implemented** a **secure document management system** using **Spring Boot** and **MongoDB**, incorporating **versioning** and **access control** features. Utilized **JWT** for stateless authentication, ensuring secure document access across various state departments.
- Optimized **application performance** by implementing **caching strategies** with **Redis** and fine-tuning **JVM** parameters. Conducted thorough **performance testing** using **JMeter** to identify and resolve bottlenecks in high-traffic state government services.
- **Developed a real-time data processing pipeline** using **Apache Kafka** and **Spring Cloud Stream**, enabling efficient handling of large-scale data streams for state-wide analytics. Implemented **exactly-once semantics** in Kafka to ensure data integrity in critical government operations.
- Led the **implementation** of a **GraphQL API layer** using **Spring for GraphQL**, providing a flexible and efficient interface for state government data queries. Optimized GraphQL resolvers and implemented **DataLoader** for efficient batching and caching of database queries.
- **Engineered a fault-tolerant system** using **Spring Cloud Circuit Breaker** and **Resilience4j**, ensuring high availability of critical state services. Implemented **retry mechanisms** and **fallback strategies** to handle service failures gracefully.

- Developed a **custom authentication and authorization system** using **Spring Security** and **OAuth 2.0**, integrating with the state's existing identity management infrastructure. Implemented **role-based access control (RBAC)** to ensure secure access to sensitive government data.
- **Designed and implemented** a **scalable file storage solution** using **Azure Blob Storage** and **Spring Cloud Azure**, enabling efficient handling of large documents and media files for various state departments. Implemented **client-side encryption** to ensure data privacy during transmission and storage.
- Led the **adoption** of **Infrastructure as Code (IaC)** practices using **Terraform** and **Azure Resource Manager (ARM) templates**, automating the provisioning and management of cloud resources. Implemented **GitOps** workflows to ensure consistent and auditable infrastructure changes.
- **Developed a custom reporting engine** using **Java** and **Apache POI**, generating complex government reports from various data sources. Implemented **multi-threading** and **parallel processing** techniques to optimize report generation for large datasets.
- **Developed and maintained** complex **Spring FX** applications for state-level voter registration systems, integrating with **DynamoDB** for efficient data storage and retrieval. Implemented **REST APIs** to facilitate seamless communication between various government departments, enhancing inter-agency collaboration.
- **Optimized performance** of tax collection software on **Mac OS** platforms, reducing processing time by 40%. Implemented **JUnit** and adopted **TDD** methodologies to ensure robust code quality and minimize defects in critical financial systems.
- **Designed and implemented** a comprehensive **BDD** framework using **Cucumber-JVM** for automated testing of state-level healthcare management systems. Integrated with **Maven** for streamlined build processes and dependency management across multiple government projects.
- **Enhanced monitoring capabilities** of state infrastructure by implementing **ELK stack** and **Prometheus**, providing real-time insights into system health and performance. Utilized **Docker** containers for easy deployment and scaling of monitoring tools across various government departments.
- **Developed a centralized logging system** using **Spring FX** and **ELK stack**, enabling efficient troubleshooting and auditing of state-level IT systems. Implemented **Maven**-based build pipelines to streamline the development and deployment processes for multiple government agencies.
- **Improved disaster recovery** procedures for critical state databases by implementing automated backup solutions using **DynamoDB** and **Docker** containers. Ensured seamless operation across **Mac OS** and Windows environments, enhancing overall system reliability and data integrity.
- **Implemented a microservices architecture** using **Spring FX** and **Docker** containers for modernizing legacy state government applications. Utilized **REST APIs** for inter-service communication, significantly improving system modularity and scalability.
- **Developed and maintained** a comprehensive test automation suite using **JUnit** and **Cucumber-JVM**, adhering to **TDD** and **BDD** principles. Integrated with **Maven** for efficient test execution and reporting across various state government projects.
- **Optimized database performance** for large-scale state record management systems using **DynamoDB**, resulting in reduction in query response times. Implemented caching mechanisms and **REST APIs** to further enhance system efficiency and user experience.
- **Enhanced system observability** by implementing comprehensive logging and monitoring solutions using **ELK stack** and **Prometheus**. Developed custom dashboards for real-time visualization of key performance metrics across various state government services.
- **Improved cross-platform compatibility** of state-level applications by ensuring seamless operation on both Windows and **Mac OS** environments. Implemented **Spring FX**-based responsive user interfaces to enhance accessibility and user experience across different devices and operating systems.

Sr Full Stack Engineer

Jan 2022 - Nov 2022

Environment: Java, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Cucumber-JVM, Spring FX, Spring Boot, MongoDB, DynamoDB, RESTful APIs, GraphQL, Kafka, JWT, OAuth, Docker, Kubernetes, Mac OS, Azure Cloud Platform, JUnit, Microservices

- **Designed and implemented** a robust **full-stack application** using **Java 17** and **Spring Boot 2.6**, integrating **REST APIs** and **GraphQL** for flexible data querying. Utilized **Spring Security** with **JWT** and **OAuth 2.0** to ensure secure authentication and authorization across the application.
- **Developed** a high-performance **microservices architecture** using **Docker** and **Kubernetes** for containerization and orchestration. Implemented **Kafka** for event-driven communication between services, ensuring scalability and fault tolerance in the distributed system.
- **Created and maintained** a comprehensive **test suite** using **JUnit 5**, adhering to **TDD** and **BDD** principles with **Cucumber-JVM** for behavior-driven development. Achieved over 90% code coverage, significantly reducing bugs and improving overall software quality.
- **Optimized** database performance by implementing **MongoDB** sharding and indexing strategies, resulting in improved query response times. Utilized **MongoDB** aggregation pipeline for complex data analysis and reporting tasks.
- **Implemented a CI/CD pipeline** using **Azure DevOps**, integrating with **Docker** and **Kubernetes** for automated building, testing, and deployment of microservices. Configured **Prometheus** for monitoring and alerting, ensuring high availability and performance of the application.
- **Developed and integrated** custom **Spring Boot** actuators for enhanced application health monitoring and metrics collection. Utilized **Prometheus** and Grafana for real-time visualization of system performance and resource utilization.
- **Designed and implemented** a **RESTful API** gateway using **Spring Cloud Gateway**, incorporating rate limiting, circuit breaking, and load balancing features. Implemented **OAuth 2.0** token validation and **JWT** parsing for secure API access.
- **Optimized** application performance by implementing caching strategies using **Spring Cache** and Redis, significantly reducing database load and improving response times for frequently accessed data.
- **Contributed** to the development of **infrastructure-as-code** using **Terraform** and **Azure Resource Manager** templates, automating the provisioning and management of cloud resources in **Azure**. Implemented best practices for security and scalability in cloud infrastructure.
- **Implemented event sourcing** and **CQRS** patterns using **Kafka** and **MongoDB**, enabling better scalability and performance for complex business operations. Designed and implemented domain-driven microservices architecture.
- **Developed and maintained** **Spring FX** based desktop applications, integrating with backend services through **REST APIs**. Implemented responsive UI design and multi-threading for improved user experience on **Mac OS** systems.
- **Implemented OAuth 2.0** authorization server using **Spring Authorization Server**, supporting various grant types and token customization. Integrated with **Azure Active Directory** for enterprise-level identity management.
- **Designed and implemented** a **distributed tracing** solution using **Spring Cloud Sleuth** and **Zipkin**, enhancing observability across microservices. Integrated with **Prometheus** for comprehensive monitoring and alerting.
- **Developed** custom **Spring Boot** starters and auto-configurations, promoting code reusability and standardization across multiple microservices. Implemented **aspect-oriented programming** for cross-cutting concerns such as logging and performance monitoring.
- **Developed and maintained** complex **Java**-based applications, utilizing **Spring FX** for enhanced user interface design. Implemented **robust error handling** and **logging mechanisms** to improve system reliability and facilitate troubleshooting. **Java** and **Spring FX** were instrumental in creating responsive and scalable solutions.
- **Implemented Test-Driven Development (TDD)** practices using **JUnit** for comprehensive unit testing of critical system components. **Increased code coverage** and **reduced bug occurrence** in production releases. **TDD** and **JUnit** became integral parts of the development workflow.

- Adopted **Behavior-Driven Development (BDD)** methodologies to enhance collaboration between technical and non-technical stakeholders. Utilized **Cucumber-JVM** for writing clear, executable specifications that served as living documentation. **BDD** and **Cucumber-JVM** significantly improved requirement understanding and test clarity.
- **Optimized database queries** and **implemented caching strategies** in **Java**-based applications, resulting in reduction in response times for high-traffic API endpoints. Conducted thorough **performance testing** and **profiling** to identify and resolve bottlenecks in the system.

**Client: Bank Of the West
Nebraska**

Full Stack Developer

Omaha,

Feb 2021 - Jan 2022

Environment: Java, Test-Driven Development (TDD), Behavior-Driven Development (BDD), Cucumber-JVM, Spring FX, Spring Boot, MongoDB, DynamoDB, RESTful APIs, GraphQL, Kafka, JWT, OAuth, Docker, Kubernetes, Mac OS, Azure Cloud Platform, JUnit, Microservices

- Designed and implemented a **secure banking transaction system** using **Java** and **Spring Boot**, integrating **JWT** authentication to ensure data integrity and confidentiality. Utilized **Java's** cryptography libraries to encrypt sensitive financial information during transmission and storage.
- Developed a **real-time fraud detection service** leveraging **Kafka** for high-throughput event streaming, processing over 10,000 transactions per second. Implemented complex fraud detection algorithms in **Java**, reducing false positives by optimizing pattern recognition techniques.
- Created a **GraphQL API** for a customer account management system, improving query efficiency and reducing data overfetching. Utilized **GraphQL's** schema stitching to integrate multiple microservices, enhancing the overall performance of the banking application.
- Implemented a **continuous integration and deployment pipeline** using **Docker** and **Azure DevOps**, automating the build, test, and deployment processes. Containerized applications with **Docker** to ensure consistency across development, testing, and production environments.
- Designed and developed a **high-performance loan processing system** using **Java** and **Spring Boot**, integrating with **DynamoDB** for scalable data storage. Optimized **DynamoDB** read and write operations to handle peak loads during high-volume lending periods.
- Implemented **Test-Driven Development (TDD)** practices using **JUnit** and **Mockito**, achieving code coverage for critical banking modules. Utilized **TDD** to improve code quality and reduce bugs in production deployments.
- Developed **RESTful APIs** for integration with third-party payment gateways, ensuring secure and compliant financial transactions. Implemented **OAuth 2.0** and **JWT** token-based authentication for API security, adhering to banking industry standards.
- Utilized **Behavior-Driven Development (BDD)** with **Cucumber-JVM** to create executable specifications for critical banking features. Improved collaboration between development and business teams by using **BDD** to align technical implementations with business requirements.
- Implemented a **centralized logging and monitoring solution** using the **ELK stack** (Elasticsearch, Logstash, Kibana) to enhance system observability. Created custom dashboards in Kibana to visualize key performance indicators and detect anomalies in banking operations.
- Developed a **mobile banking application** using **React Native** and integrated it with backend **REST APIs**, providing customers with secure access to their accounts and transactions. Implemented biometric authentication and **JWT** token management for enhanced mobile security.
- Optimized database queries and implemented caching strategies using **Redis**, reducing average response times for frequently accessed banking data by 60%. Utilized **Java** streams and parallel processing to improve the efficiency of data aggregation operations.
- Implemented a **microservices architecture** using **Spring Boot** and **Docker**, improving system scalability and maintainability. Utilized service discovery and load balancing techniques to ensure high availability of critical banking services.
- Developed a **real-time reporting system** using **Apache Spark** and **Kafka** to process and analyze large volumes of transaction data. Created interactive dashboards using **Tableau** to visualize key financial metrics and trends for executive decision-making.

- Implemented **GitFlow** workflow and code review processes using **Git** and **Azure DevOps**, improving collaboration and code quality across the development team. Utilized **Git** branching strategies to manage feature development and hotfixes effectively.
- Conducted regular **security audits** and implemented **OWASP** best practices to protect against common web application vulnerabilities. Utilized static code analysis tools and performed penetration testing to identify and mitigate potential security risks in the banking application.
- Here are 5 additional professional experience points for a client in the Banking domain:
- Developed and maintained **secure banking applications** using **REST APIs** and **Mac OS** development environment, ensuring seamless integration with core banking systems. Implemented robust authentication mechanisms and encryption protocols to protect sensitive financial data, while optimizing application performance on **Mac OS** platforms.
- Conducted comprehensive **unit testing** using **JUnit** framework to validate the functionality of critical banking modules, including transaction processing and account management. Created extensive test suites to cover various scenarios, significantly improving code quality and reducing post-deployment issues in banking software.
- Implemented **behavior-driven development** practices using **Cucumber-JVM** for banking software projects, enhancing collaboration between technical and non-technical stakeholders. Wrote clear and concise feature files to define expected behavior of banking applications, facilitating better understanding and alignment with business requirements.
- Utilized **elk stack** for centralized logging and monitoring of banking applications, enabling real-time tracking of transaction flows and system performance. Configured custom dashboards and alerts to proactively identify and address potential issues, ensuring high availability and reliability of critical banking services.
- Collaborated with cross-functional teams to design and implement **robust security measures** for banking applications, including multi-factor authentication and fraud detection algorithms. Conducted regular security audits and vulnerability assessments to maintain compliance with industry regulations and protect customer financial information.
